Establishment of a Genetrix Photography File on the USSR at Stewart Building

1. Genetrix photography has been proven to be valuable as comparative coverage for TALENT photography. This photography is stored in St. Louis and it takes three weeks to procure the film.
2. It is requested that a duplicate positive file of selected coverage be established at Stewart building. This would make the coverage readily available to analysts.
3. This project would involve a total of 24 missions over the USSR of which selected frames could be copied.
4. A Genetrix Coverage Summary by TALENT experienced analysts could be prepared on a low-priority basis. This summary could assist analysts working on future TALENT coverage.
